Riana Minocher: EARS (fetching)
/eco_minocher/EARS/fetched

_____

FETCHING ARTICLES

- go to folder:
    /**eco_minocher/EARS**
- open file:
    citations.txt

- you will see a list of citations
- the **goal** is to download PDF versions of all the citations

- go through the list *from top to bottom*
- copy a citation and paste it into **google scholar**

- in the most straight-forward cases, you'll find a link to the PDF version on the right of the search result
- however, some citations will require a little more effort:
    - in the search result section, click on the name of the paper
    - you should be taken to a page where you can somewhere download a PDF
        --> you may have to search for the download link!

    --> if you'll come across a scenario that we haven't anticipated, *please seek advice from Silke and/or Riana!!*

- download the provided PDF
- move the downloaded PDF to:
    /**eco_minocher/EARS/fetched**
    --> *double-check that the fetched PDF is indeed in the ../fetched folder!*
    THEN: leave the following entry behind the citation in **citations.txt**:
    [fetched]
    --> this way you can keep track of the articles you have already processed!

- if you'll ever come across an article...
    ...that you cannot find with google scholar
    ...for which google scholar doesn't provide a PDF for download
    --> leave the following entry behind the citation in ***citations.txt***:
    [failed]
    (we'll figure out an alternative approach at a later point in time)
