Riana Minocher: **/eco_minocher/EARS**

_____

####SCRAPING BOOK CHAPTERS####

1) CREATE BIBTEX AND CITATION KEY

Check if you can find a Bibtex entry for the book chapter, just as you usually do for articles.

However, a lot of book chapters will not have a Bibtex page. In those cases, you will have to **create a BIB-file** from scratch.

In order to do so, use the file **book_bib_template.bib** in **/eco_minocher/EARS**.

If a book chapter does not have a Bibtex entry, you will also have to **create a citation key**, following Riana's instructions.

_____

2) USE YAML TEMPLATE EXTENSION

For book chapters, you will have to insert some additional variables.

Use the file **publication_template_extension.yam**l in **/eco_minocher/EARS**.

Paste the additional variables between "journal" and "authors".

NOTES on how to fill in information for book chapters (including the additional fields).

citation_key: *create new citation key, if necessary*
scraper_name: *as usual*
scraper_comments: *as usual*

doi: *leave blank if cannot be found online*
title: *title of the book* **CHAPTER**
year: *year of publication*
journal: *enter the word "***book***"*

(additional fields)
book_title: *title of the* **BOOK**
editors: *names of the* **EDITORS** *(the names of the authors will be entered as usual)*
publisher: *the name of the book publisher*
isbn: *book ISBN (check google)*
